## Bots

We have a few bots that work for us :)

A few use-cases where we use our bots:

- When a customer adds a website we check if the script is installed correctly
- If a website doesn't have traffic anymore, we send a fake page view to detect our (missing) script  
*(it's blocked by most analytics tools because we add `bot` in the User-Agent string)*
- We also check which technologies are used on their website so we can show the best plugin for their needs
- We generate screenshots of public referral pages

You can to disable alerts for your missing script in [your website settings](#).

The bots are usually identified with this User-Agent string:

```
Mozilla/5.0 (compatible; SimpleAnalyticsBot/1.0;  
+https://docs.simpleanalytics.com/bots)
```

Do you think this bot is causing noise? Please [let us know!](#)
