

Simple Analytics

This pdf is generated on May 9, 2021. Go to [the documentation page](#) for the most up-to-date version.

How to add our script

Include these two lines at the end of your `<body>` (or anywhere else):

```
<script async defer src="https://scripts.simpleanalyticscdn.com/latest.js">
</script> <noscript></noscript>
```

To install the script on Wordpress, Ghost, WIX, Squarespace, Webflow, Gatsby, Vue, Django, Ruby, and others, go to [install on other platforms](#).

We have a website setup wizard to test if you installed your script correctly. If you still have problems installing it, please let us know! We helped a lot of people with setting up their script and we love to help you as well. Just [contact](#) us.

Developers

With Simple Analytics you don't need to manually trigger page views in SPA. We automatically trigger page views in [Single Page Apps \(SPA's\)](#) like React, Vue, and Angular. You can also use [hash navigation](#) to trigger page views.

Some people like a very light script. All our scripts are heavily compressed and we have [an extra light](#) version.

If you want to run the script on localhost, please use our dev (<https://scripts.simpleanalyticscdn.com/latest.dev.js>) version. Note the `.dev` part. You might want to [overwrite your hostname](#) from localhost to something like `dev.example.com` (where `example.com` is your domain) to receive it in your dashboard. Make sure to remove the `.dev` part from the script on production.

When you are done implementing [go to your dashboard](#).

If you encounter issues, don't hesitate to contact us via [our support channels](#).

Open source

Our user facing scripts are [open source on GitHub](#).
