

# Simple Analytics

This pdf is generated on May 9, 2021. Go to [the documentation page](#) for the most up-to-date version.

## Overwrite domain name

Sometimes you want to link multiple domains into one domain in your dashboard. Or you want to use a different domain than people see in their browser address bar. You can overwrite the default domain name by specifying its hostname.

Make sure to include the our `simpleanalyticscdn.com` script. Include these two lines at the end of your `<body>` :

```
<script async defer data-hostname=""
src="https://scripts.simpleanalyticscdn.com/latest.js"></script> <noscript></noscript>
```

You see that we added an attribute ( `data-hostname=""` ) to the script tag. If you add your domain to it (eg `example.com` ) it will look like this:

```
<script async defer data-hostname="example.com"
src="https://scripts.simpleanalyticscdn.com/latest.js"></script> <noscript></noscript>
```

## Add used domain to your dashboard

Now all the visits you collect with this script are collected under the name `example.com` . Make sure you [add the new used domain name](#) ( `example.com` ) to your dashboard.
