

# Simple Analytics

This pdf is generated on April 15, 2021. Go to [the documentation page](#) for the most up-to-date version.

## Embed chart on your site

Simple Analytics has a script which you can use to embed public website statistics.

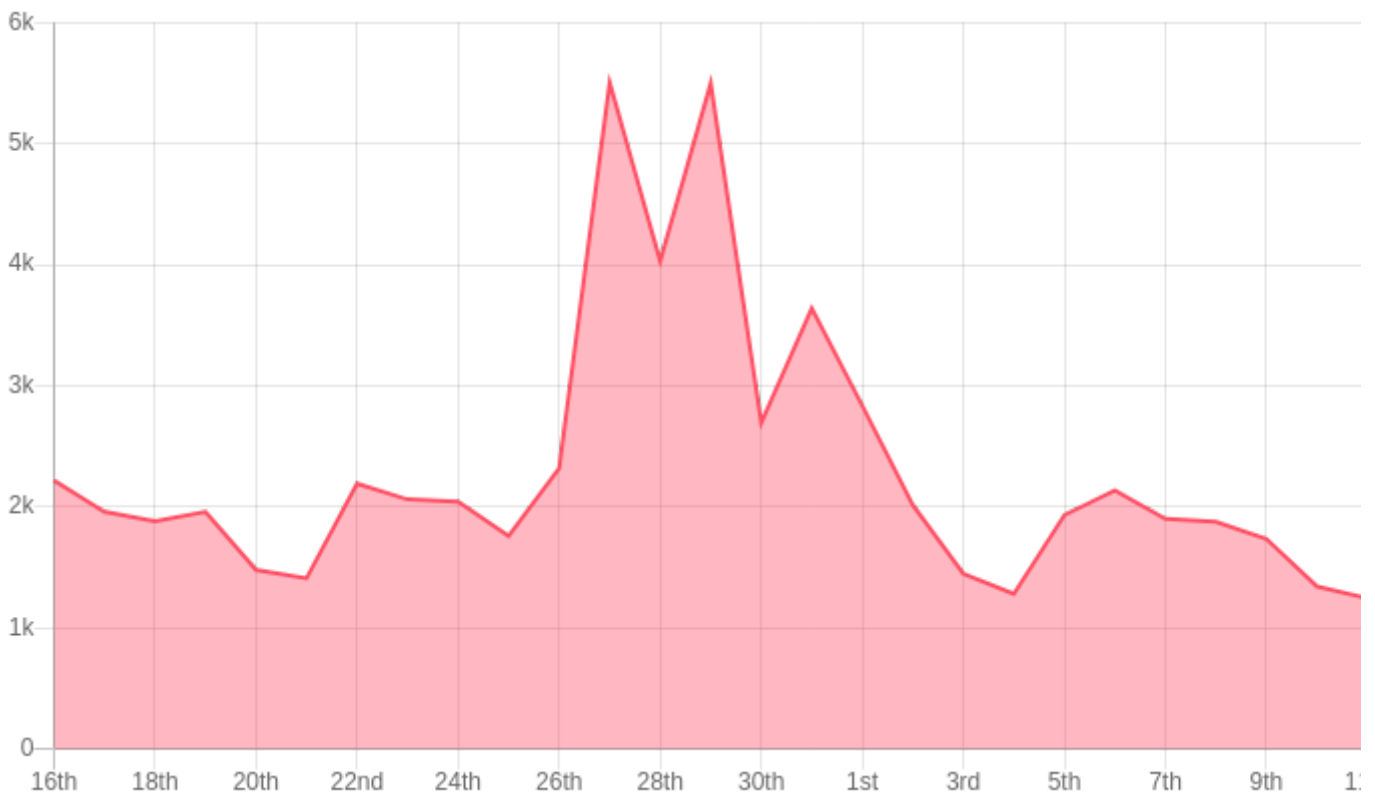

Do you want to access your stats with even more freedom? Use our [API](#) for that!

```
<p> This website has <span id="pageviews"></span> page views in the last month.
</p> <div data-sa-graph-url="https://simpleanalytics.com/example.com?
color=75b5aa" data-sa-page-views-selector="#pageviews" > <p> Ad blockers don't
like the Simple Analytics embed, disable yours to view this chart. </p> </div>
<script src="https://scripts.simpleanalyticscdn.com/embed.js"></script>
```

Change [example.com](#) to your own website

## Example

Simple Analytics has 68,555 page views in the last month.

## Customize

You can give the charts different colors by adding `?color=75b5aa` to the url of the `data-sa-graph-url` attribute. If you like to show the total page views you can use the `data-sa-page-views-selector` attribute. It will be filled via JavaScript `textContent` attribute (so it only works on text tags like `span`, `p`, `h2`).

You can just copy paste links from the normal dashboard, like these:

- <https://simpleanalytics.com/example.com>
- <https://simpleanalytics.com/example.com/contact> (stats of contact page)
- <https://simpleanalytics.com/example.com/> (stats of home page)
- <https://simpleanalytics.com/example.com?color=ff6600>
- <https://simpleanalytics.com/example.com?start=2018-09-17&end=2018-09-23>

*If you include multiple charts on your website make sure you include `<script src="https://scripts.simpleanalyticscdn.com/embed.js"></script>` only once.*

## Spikes

It happens that some data has huge spikes. This is great traffic wise, but you might want to cut off the spike in the chart to make more sense out of your data before and after the spikes. You can change this with the `y-limit` parameter. To limit your chart to – let's say 50,000 page views – you can add it like this: <https://simpleanalytics.com/example.com?y-limit=50000> .

## Scaling issues

Sometimes the chart does not stretch to the full page width. This can be caused by adding the `div` with the `data-sa-graph-url` -attribute in a flex element with `align-items: center` . This makes the div not stretch to the full width anymore. It can be solved by adding `align-self: stretch` to the `div` with the `data-sa-graph-url` -attribute. See this example:

```
<div class="your-parent-class"> <p> This website has <span id="pageviews">
</span> page views in the last month. </p> <div class="your-chart-class" data-
sa-graph-url="https://simpleanalytics.com/example.com?color=75b5aa" data-sa-
page-views-selector="#pageviews" > <p> Ad blockers don't like the Simple
Analytics embed, disable yours to view this chart. </p> </div> </div> <script
src="https://scripts.simpleanalyticscdn.com/embed.js"></script> <style> .your-
parent-class { display: flex; flex-direction: column; align-items: center; }
.your-chart-class { align-self: stretch; /* This is the needed styling */ }
</style>
```

If you have other issues, [please let us know](#) because we love to help you! Do you want to access your stats with even more freedom? Use our [API](#) for that.
