

Simple Analytics

This pdf is generated on June 28, 2022. Go to [the documentation page](#) for the most up-to-date version.

Install Simple Analytics with Vue.js

Run this command to install Simple Analytics for Vue:

```
npm install simple-analytics-vue
```

Import Vue in your app

Import the plugin and add it to `Vue.use`. You can add a `skip` option which will define when page views should be skipped. This can be useful if you want to skip page views from yourself when developing your app.

```
import SimpleAnalytics from "simple-analytics-vue"; import Vue from "vue";  
Vue.use(SimpleAnalytics, { skip: process.env.NODE_ENV !== "production" });
```

You can also pass a function or promise to `skip`, which will be validated before injecting the Simple Analytics embed code:

```
import auth from "lib/auth"; Vue.use(SimpleAnalytics, { skip:  
auth.isAdminPromise });
```

You can also optionally specify a custom domain to bypass ad blockers. Read more about this in [our documentation](#).

```
Vue.use(SimpleAnalytics, { domain: "api.example.com" });
```

Events

To send an event, use the globally available `saEvent` method.

```
// ~/src/components/Comment.vue { methods: { likeComment (comment) { // code to  
like comment this.saEvent(`comment_like_${comment.id}`) } } }
```

Note: Simple Analytics does not run on localhost. You can still fire events, but they will be captured and logged in the console for debugging purposes.

Nuxt.js

Create a file in your plugin folder with the name `simple-analytics.js`:

```
// ~/plugins/simple-analytics.js import SimpleAnalytics from "simple-analytics-vue"; import Vue from "vue"; Vue.use(SimpleAnalytics, { skip: process.env.NODE_ENV !== "production" });
```

Then on your `nuxt.config.js`, make sure to include the plugin with `ssr: false` as we only want to run it on the client:

```
// nuxt.config.js export default { plugins: [{ src: "~/plugins/simple-analytics.js", ssr: false }], };
```

If you need any additional configuration options (as mentioned above), you need to apply them to your plugin.
