WP Full Picture plugin

[WP Full Picture](#) is a WordPress plugin with more features than [the official Simple Analytics plugin](#).

WP Full Picture lets you:

- Load Simple Analytics only in specific countries. Simply enable geolocation module and choose countries that you want to use SA in
- Do not track page views until pages are actually viewed (e.g. when they are opened in tabs). This works out-of-the-box with no extra setup.
- Turn off tracking for specific user roles and users who are not logged in ([more information](#))
- See traffic from some Android applications ([requires extra setup](#))
- Use custom domain for bypassing ad-blockers (after setting it up as [described here](#))
- Join traffic data from multiple websites under one domain without the need to [modify the script](#)
- Run on localhost without having to modify the script
- Track single-page websites (clicks on navigation links that scroll to different parts of the page will be counted as different page views)

See the plugin in action on a temporary Wordpress website on [tastewp.com](#). Simply [click this link to generate a new test site](#).

This is how the settings page looks:

Simple Analytics settings menu in WordPress' WP Full Picture plugin

How to install Simple Analytics with the WP Full Picture plugin

1. Go to your WordPress admin
2. Go to **Plugins** in your WordPress admin and click on **Add new**:
3. Click on **Search Plugins** and type `wp full picture`
4. Click on **Install Now**
