▂▃▅ Simple Analytics

Admin API

Use this if you want to administer your account. With this API you can do a few things, for example, list all websites and add websites to your dashboard.

List websites

GET https://simpleanalytics.com/api/websites

The only Admin API endpoint that is available for all plans.

```
curl "https://simpleanalytics.com/api/websites" \ -H 'Content-Type:
application/json' \ -H 'Api-Key:
sa_api_key_xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx' \ -H 'User-Id:
sa_user_id_00000000-0000-0000-0000-000000000000'
```

Your user ID and API key are shown in [your account settings](https://). The team ID does not have any effect on this endpoint. It always returns all websites for a user.

Add a website

POST https://simpleanalytics.com/api/websites/add
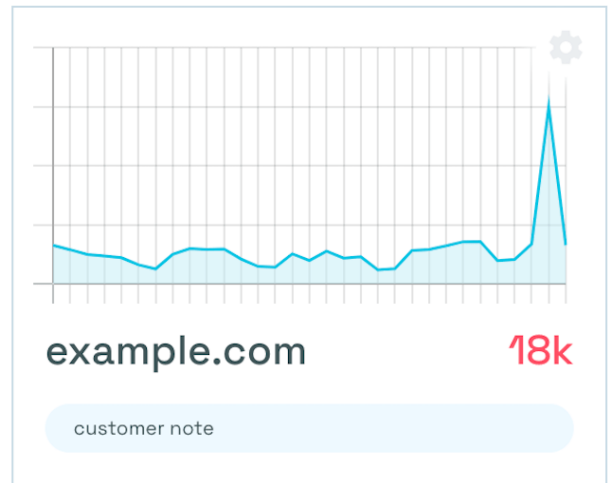

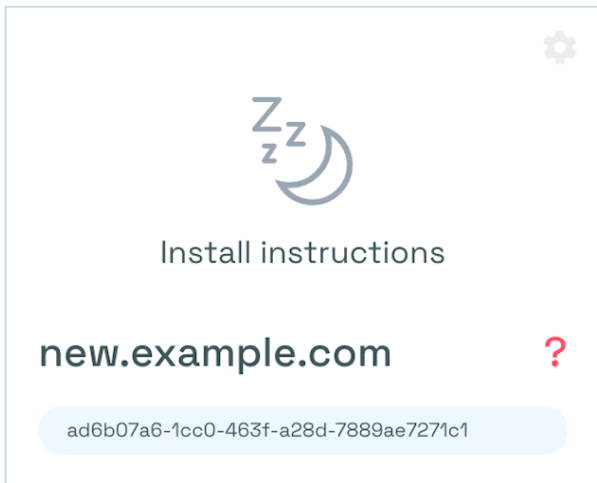

For this endpoint you need a Business or Enterprise plan. You will be upgraded automatically when using this endpoint.

You can specify a time zone via `timezone` and set the website to public or private via the `public` boolean. [See wikipedia](https://) for a list of valid time zones. If you don't specify a time zone we will set it to UTC.

```
curl -X "POST" "http://localhost:3000/api/websites/add" \ -H 'Content-Type:
application/json' \ -H 'Api-Key:
sa_api_key_xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx' \ -H 'User-Id:
sa_user_id_00000000-0000-0000-0000-000000000000' \ -d $'{ "public": false,
"hostname": "example.com", "timezone": "Europe/Amsterdam" }'
```

Labels

If you want to keep track of your websites in a different way. A label could help. This is how that looks at the websites overview page:

Add `"label": "customer note"` to your request body to set a label. Only strings are allowed.

Custom endpoints

For bigger customers we make custom endpoints. If you are in the need of a custom endpoint, [let us know](#).
