Passwords

You can always login with just your email. Some users like to login with a password. This can be faster than with email only.

We know you can share your passwords with colleagues, but it's not allowed with the Starter plan. Only with the Business plan.

Here are the steps you need to take to reset or set your password:

1. Make sure to be logged in (you can always use [email login](#)).
2. Go to [your account settings](#).
3. In account settings you see a link (when you didn't setup a password yet) to setup a password. Click this link:

Account settings

Credentials

adriaan@example.com [Update email](#)

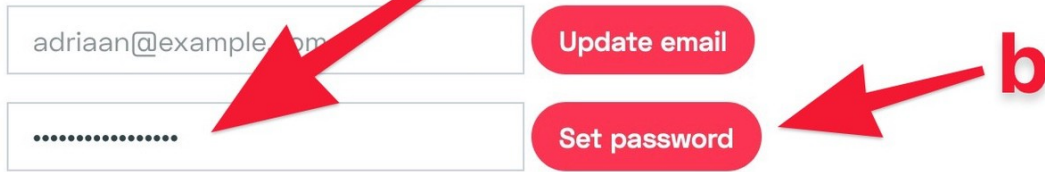

You can [set a password](#) if you want to use password login. When enabling password login it's still possible to login with email links.

4. Fill in a password (a) and click on the "Update password" button (b).

Make sure the **password is long**, we don't enforce this, but length is the most important security of a password.

Set password

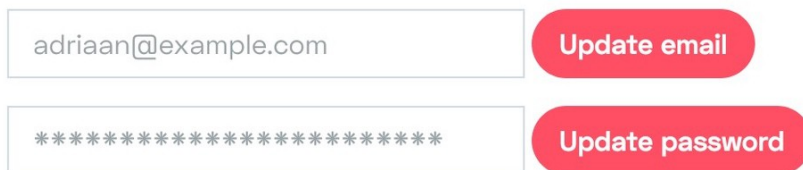

You can [set a password](#) if you want to use password login. When enabling password login it's still possible to login with email links.

5. Once saved you see the confirmation message saying "Password is successfully updated"
